EARLY FORTUNE CUCUMBER.

The Earliest and Best White Spine Cucumber ever offered.

84. Full-blooded, as pretty as a picture, and extremely early, wonderfully productive, a model in shape, of the most inviting and attractive deep green color. Is there any wonder we name this money-maker "Early Fortune" Cucumber? From very expensive and thorough tests of every Cucumber grown, we selected the parents of this excellent stock. The result went far beyond our greatest hope. We found we had a Cucumber that was without a doubt the finest in the world. Realizing a very heavy demand would immediately come as soon as the Cucumber growers learned of our "Early Fortune" Cucumber, we let one year go by in order to insure our supply of seed, but even now the quantity of this seed is very limited. If you wish to secure any of it this coming year for hot-house, frames, or open field culture, you had better order immediately, or our short supply will be exhausted.

Pkt. 5c and 10c, Oz. 15c, 1/4 Lb. 25c, 1/2 Lb. 50c, Lb. $1.00.

J. BOLGIANO & SON, Baltimore, Md. FLORIDA, September 8, 1904.
Gentlemen:—I have grown your **Early Fortune Cucumber** seed and without hesitation, pronounce it the finest I have ever seen or grown. Its fine shape and color surpasses all others. I have seen the Cucumbers, when thrown out in packing, stay perfectly green in color for 3 or 4 weeks, or until decay sets in. I will plant no other as long as Early Fortune can be had. J. H. CRIMSON CLOVER

CRIMSON CLOVER.

129 **CRIMSON CLOVER IS A GREAT SOIL-IMPROVER,** and equal in fertilizing value to a good application of stable manure, and will wonderfully increase the yield and quality of corn or other crops which follow it. For orchards and fruit lands it is considered by long odds the best soil-improving crop that can be used. Crimson Clover also makes splendid **winter and spring grazing, fine early green feed or a good hay crop.** It will yield, under favorable conditions, eight to ten tons of green food per acre, or one and a half to two tons of hay, and is worth, as a fertilizing crop, $20 to $25 per acre. It makes its crop very early, so that a full crop can be made, and either cut off or plowed under and corn or other crops planted the same season. Even after the crop is cut off, the action of the roots and stubble improves the land to a marked degree. In the far South the crop makes its full growth by the end of April; in this section, early in May; so that it leaves plenty of time for other crops to follow it.

BEST METHODS OF SEEDING. Crimson Clover can be sown very satisfactorily in corn or cotton at the last working, and in fact, the conditions for seeding at this time give an excellent preparation for Crimson Clover, as this crop should always be sown on land **that has been plowed sometime previous to seeding.** Freshly plowed land is usually too porous, causing the seed to be covered too deeply, or not giving the little plant sufficient root-hold after it does start; so that a good, firm seed bed is of prime importance to secure a good crop. When Crimson Clover is sown by itself, the best preparation is to prepare the land some time previous to seeding, and then wait for a rain before sowing the seed. As soon after a rain as the land is dry enough, a light harrow should be run over the soil, in order to break the crust. Then sow the clover seed, covering afterwards with a light or brush harrow. If this plan is followed out, it will almost invariably insure a good stand, and good crop of Crimson Clover, no matter what the weather may be afterwards. Sow at the rate of 15 lbs. (one peck) per acre, any time in the summer or fall, previous to the middle of October. Some of our customers who believe in thick seeding, sow as much as 30 lbs. (half a bushel) of Crimson Clover per acre. They claim that they get thicker stands and better crops from the thick seedings, and as the seed is comparatively cheap, that it pays them well to put on the extra seeds. Under favorable circumstances, however, 15 lbs. (one peck) per acre should give entirely satisfactory results. Prices fluctuate. We will quote prices promptly at any time or fill orders entrusted to us at lowest ruling prices at the time order is received. Present prices July 1st for our Best Seed is **$4.80 Bushel.**

128. **Alfalfa or Lucerne.**—As nutritious for dairy cows as the best mill feeds. The great agricultural clover of the West; now rapidly coming into favor in the East. Well adapted to dry sections, but thriving anywhere on well-drained soil. It is a perennial plant lasting many years under good treatment, and may be cut several times each season when well established. Perfectly hardy. Root system remarkable for development. Alfalfa roots not infrequently descend ten or more feet into the soil, indicating ability to resist drought. Recent experiments at the New Jersey station show that Alfalfa has an extremely high value as a forage crop in the East. It is not to be recommended for wet or heavy soils, but should be tried by all dairymen whose land has good underdrainage. Use 30 to 35 lbs. of seed per acre. Sow in April and May, on well limed land. An Alfalfa field is worthy of all care and expense required to produce. Bulletin No. 148 of N. J. Station, issued in February, 1901, says: "The average yield of green forage per acre for three years (including the first year) was 18.27 tons, equivalent to 4.57 tons of hay. The yield the third year from five cuttings was 26.6 tons of green forage, equivaleut to 6.65 tons of hay." **Pkt. 5c. and 10c. Lb. 15c. Write for Lowest Prices in Quantity. Choicest $7.50 Bus.**

TIMOTHY.

117. This grass is most commonly cultivated for hay, and for that purpose probably surpasses all other grasses in cultivation. It makes the best hay for horses and market on the entire list, and being early grass, is well adapted for Spring grazing. It is perennial, and if the meadow is kept in good fertility by surface dressing, it will bear crops indefinitely. **Per lb. 8c. Per bus. of 45 lbs. $1.50.**

Succeeds in a wider range of temperature than any other grass. 25 to 30 lbs. per acre. (Bus., 14 lbs.) **Lb. 15c. 10 lbs. $1.40. 25 to 100 lbs. best @ 10c.**

MILLET

GERMAN OR GOLDEN MILLET.

GERMAN MILLET.

125. The Millet is a very valuable forage crop and has become very popular with all planters. The German, or Golden, is decidedly the best variety to grow, producing large crop of fine grass, ranging in growth from four and one-half to six feet high, according to strength of soil, which can be cut green or made into hay, and is readily eaten by all kinds of stock. Its yield is from one and one-half to two and one-half tons to the acre. It requires a bushel to sow one acre. **Per lb., 6c. Per bus., $1.10.**

HUNGARIAN MILLET GRASS.

126. One of the most valuable annual soiling forage plants growing in any ordinary soil; withstands the drought; 48 pounds to the bushel; one bushel to the acre. **Bus. $1.10.**

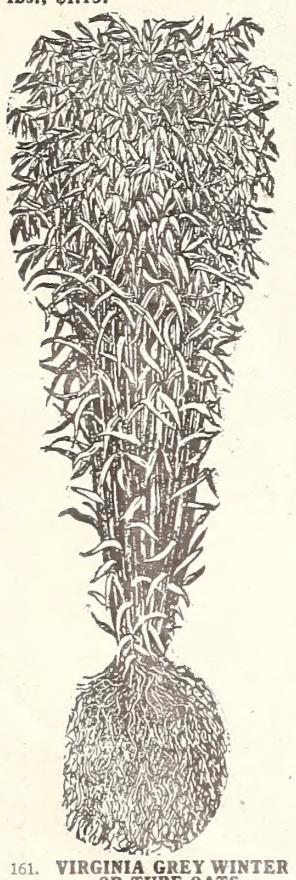
Early Orange.—Bus. $1.10.
137. **Wild Rice.—Lb. 15c. 10 lbs. $1.25.**
134. **Speltz or Emmer [Triticum Spelta.]**—This grain has been grown for centuries in Russia, near the Caspian Sea. It has already attracted very wide attention on account of its successful cultivation in the Northwestern States. The grain is intermediate between wheat and barley, and is readily eaten by all kinds of stock. It is adapted for both milling and feeding, making a grade of flour similar to rye. The straw resembles wheat straw. It grows large crops, 40 to 80 bushels per acre, on poor lands, stony ground and open prairies, and will give double the crop of oats or barley. It resists drought successfully. Drill at rate of 3 bushels per acre. **Pkt. 5c. Lb. 10c. Qt. 15c. Peck 50c. Bus. $1.50.**



161. **VIRGINIA GREY WINTER OR TURF OATS.**

Perfectly hardy in the Southern and Middle States, standing the winter nearly as well as wheat. Yields, on good land, from 50 to 70 bushels to the acre, of fine, heavy grain, weighing from 35 to 40 pounds to the measured bushel. Furnishes excellent fall, winter and early spring grazing, without injury to the grain crop. **65c. bu.**

BARLEY.

Winter Barley.—The earliest Barley known. If sown about October, will ripen early. The straw is about the height of the common Barley, but better, and will stand up on any land. Sow as early as you can; frost does not hurt it. It handles as easy as oats, and makes a stronger feed. **Peck 50c. Bus.,$1.10.**

149. SAND OR WINTER VETCH.

(VICIA VILLOSA.)

Tho earliest crop for cutting and plowing under in Spring, being nearly a month earlier than Scarlet Clover, and a full crop can be off the land in time for planting Spring Crops.

It is perfectly hardy throughout the United States, remaining green all winter, and should be sown during August and October, mixed with Rye, which serves as a support for the plants, or in Spring with Oats or Barley.

It succeeds and produces good crops on poor sandy soils, though it is more vigorous on good land, and grows to a height of 4 to 5 feet. It is much hardier than Scarlet Clover, and is very valuable in the South. Every Dairyman and stock-breeder in the United States should have a field of it.

It is exceedingly nutritious, much more so than Clover, is eaten with a relish, and may be fed with safety to all kinds of stock.

It will also prove valuable for a Hay Crop in the South and dry Western regions, as it may be sown in the Fall.

Sow one bushel per acre, with one-half bushel of Rye or Wheat.

10c. pound. $4.80 bushel of 60 pounds. 100 pounds $8.00. If by mail add 8c. per pound.

Tissue Culture Pure Mushroom Spawn.

Delicious Mushrooms may be grown by anyone having a fresh supply of horse manure and a tight shed or cellar where a temperature of 50 to 60 degrees can be evenly maintained.

The superiority of Tissue Culture Pure Spawn results from the improved methods and expert judgment used in making our stock cultures, giving the following advantages: (1) All the advantages of a "Virgin Spawn." (2) Superior varieties, that is, varieties giving greater yields and better Mushrooms. (3) Complete elimination of any "chance" of having spent spawn or spawn from poor sorts. **Brick 15c.**

BOLGIANO'S ENGLISH MILL TRACK SPAWN.

Frequent importations by us insure its being fresh and the "mycelium" alive. It comes in bricks weighing about 1¼ pounds, enough to plant a bed 9 square feet. **Brick 15c.**

DWARF ESSEX RAPE.

DWARF ESSEX RAPE.—Valuable for Cattle, Sheep and Hogs.

127. Under favorable conditions Rape is ready for pasturing sheep or cattle within six weeks from time of sowing, and on an average one acre will carry from 12 to 15 sheep six weeks to two months. When on the Rape they should at all times have access to salt; but water is not necessary. As it thrives best in cool weather, it should not be sown in the Southern States until September or October for winter pasture. Its fattening properties are probably twice as good as those of clover, and for sheep the feeding value of Rape excells all other plants we know of. Sow 4 lbs. per acre broadcast, 2 to 3 lbs. per acre in drills. **10c. lb. $2.50 bus, of 50 lbs, 100 lbs. $5.00. If by mail add 8c. per lb.**

A LETTER TO YOU.

DEAR FRIENDS:—

We take this opportunity to publicly thank you for your loyalty to us during the past year. Never in the long history of our old established firm were we better prepared with a full supply of the Truest and Choicest Seeds than we were on New Year's Day, 1904. The Great Baltimore Fire of February 7th, 1904, destroyed our large store and warehouse, corner Light and Lombard Streets; also our warehouse at 235 South Street. However, through the quick and generous assistance rendered us by the Seed Growers, we were soon filling all our orders. Our customers proved the maxim, "A Friend in Need is a Friend Indeed." They not only refused to take their orders away from us, but in a large number of instances, largely increased them. This loyalty gave us new heart and we soon began to see our misfortune was but a "Blessing in Disguise."

Today with our handsome new home with every modern convenience and equipment, we are better prepared than ever to supply you with **a complete line of Reliable Seeds at Low Prices.**

Come to see us, bring or send your orders early, so we can fill them before the heavy rush of busy season.

Wishing you a Prosperous Year, and thanking you again for your past favors, we remain,

Yours truly,

J. BOLGIANO & SON, BALTIMORE, MD.

THREE THINGS WORTH KNOWING.

We don't make our prices **from 100 to 300% higher than they should be and then get liberal** and allow 25c worth of Seeds extra on each dollar sent us, but **we do three important things:**

First.—We charge every cent each item is worth, **and not one cent more.** Compare our prices with any other Seed Catalogue and when others say our prices are too low, remember our business stands on nothing else but the fact we have made it pay farmers and truckers, like yourself, to use our Reliable Seeds at these low prices for 87 years.

Second.—We will, in order that you might know many varieties of our Reliable Seeds from your own tests, allow you to select **two packets of Vegetable Seed Free** for each dollar sent us (except New 1905 Varieties.)

Third.—Money runs short sometimes before the wife has a chance at the Flower Seeds, so if you do not take the two packages of Vegetable Seeds you may select in their place for each dollar sent us **five packets of Flower Seeds Free.**

CYCLONE UP-TO-DATE BUG EXTERMINATORS.

Who does not hate the job of killing the bugs by any of the old methods? And just think of the loads of water required! Contrast these old methods with the new. These **Bug Exterminators** weigh only one pound, and one pound more when ready for use. You put your Paris Green up in papers, as doctors do their powders, one-half teaspoonful in each, and take a dozen powders and a bucket of water to the field, and you have ammunition enough to kill the bugs on a couple of acres of potatoes. You do the work at a moderate walk. Only one shot at each hill and the whole plant, stalk, stems and the upper and lower sides of the leaves are treated in such a perfect manner as to kill every bug, **while it is impossible to injure the foliage.** The people who have used these Exterminators in the

past, saved their crops, because the work was so light and done so quickly that there was no excuse for neglecting the job. Killing the bugs is not one of the easiest jobs on the farm. Don't put off getting a machine until your crop is half ruined. Begin early. With these **Bug Exterminators** you can kill the hard-shell potato bugs as readily as the soft ones. By beginning early you save the trouble of killing millions later, and all the vitality of your crop is saved. These machines combine some features not possessed by other similar machines that have been put upon the market, and which makes them superior to all others,

New Tomato, Livingston's Globe.

This new 1905 variety originates with the Livingston's of Tomato fame.

In shape it is notably distinct from all others, being a beautiful globe, with quite a good percentage of elongated (stem to blossom) fruits. This peculiarity permits of a greater number of slices to be taken than is possible with flat varieties. It is among the first to ripen; fruit of large size, and a good marketable size is maintained throughout the season; always smooth, firm-fleshed, and has very few seeds, especially in the early fruits; ripens evenly through and through; a fine glossy rose in color, tinged with purple; very productive, the plant is always loaded with fruit, as it has joints at frequent intervals and each joint produces large clusters of from 3 to 7 fruits. A remarkably good keeper; especially adapted to slicing or eating from the hand as the flavor is very delicate and agreeable.

Those who grow Tomatoes to sell will be pleased, as the beautiful and attractive globe-shaped glossy red fruits will sell readily at the top price. Seeds offered in packets (40 seeds) only this season. **Each, per pkt. 20c, 3 pkts. 50c, 7 pkts. $1.00.**

DWARF STONE TOMATO.

Double Size of Dwarf Champion, the Largest Fruited Upright Growing Variety in Existence.

This is another splendid new variety. In habit of vine it resembles Dwarf Champion, but is of stronger growth and more erect. The fruit resembles Livingston's Stone in color, shape, and what is more remarkable, it is almost the same in size.

This Tomato will meet with general favor, especially with the class of growers whose gardening is limited to a few acres, and where economy in saving land must be taken into account.

The strong, upright growth allows very close planting, at least a half closer each way than the distance required for the ordinary vining varieties.

The shape of the fruit is perfect, with a good skin, which is free from cracks about the stem end. It is very solid, ripens evenly, and is of most excellent quality.

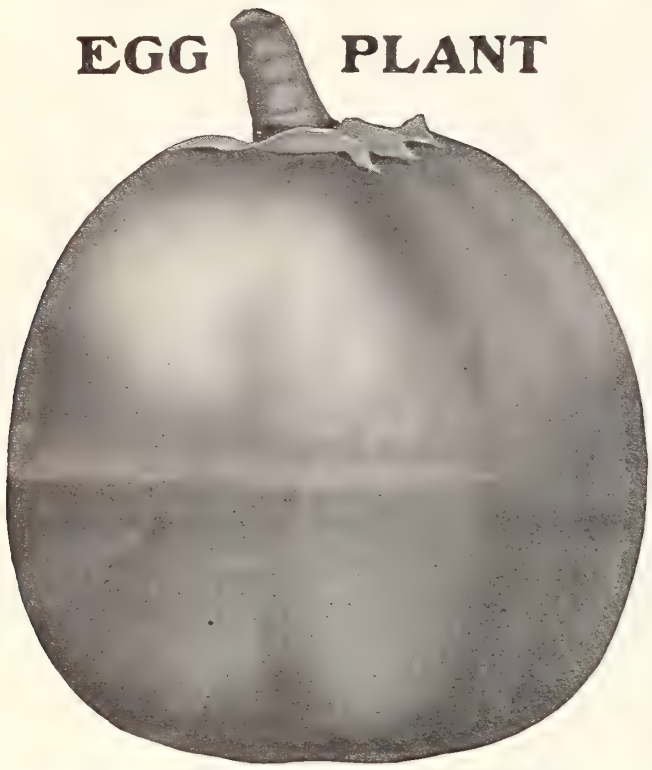
BOLGIANO'S RELIABLE EGG PLANT SEED.

BOLGIANO'S IMPROVED LARGE PURPLE

EGG PLANT



BOLGIANO'S IMPROVED LARGE PURPLE EGG PLANT.

I want to compliment you on the Egg Plant Seed I bought of you. It came up much better than the seed that I purchased in New York and Philadelphia. Yours truly, A. BENHAM, Fla.

99. **The Florida High Bush Egg Plant** has proved of the greatest value to Southern truckers and shippers. It has been grown in Florida for the past three or four years. It is remarkable for its vigorous growth and productiveness, is very hardy, and will stand more cold weather than the New York Improved. The hot sun does not blight the blossom. The plant has a characteristic leaf, unlike any other egg plant we know of. It grows from 3 to 4 feet high, erect and sturdy, free from thorns, Fruit is large, oblong in shape and purple, though not so deep a color as the New York Improved. It resists drought and wet weather to a wonderful degree, partly on account of its strong, upright growth. It stands the cold better, and is the only egg plant that stands shipping from this section to the Northern markets under almost all circumstances. It is of a large size, first-class shape, and superior flavor. Its shipping qualities are the very best. It brings the highest price in the Northern markets, keeping its freshness and condition much longer than any other variety. The growers realized good returns for this variety when all other varieties have been reported "arrived in bad condition," and many would not plant any other variety. **PKts. 5c & 10c. Oz. 25c. 1/4 Lb. 90c. 1/2 Lb. $1.75. Lb. $3.50.**

103. **BOLGIANO'S IMPROVED LARGE PURPLE EGG PLANT.**—For many years we have made the development of the Egg Plant a special study. Our efforts, with many suggestions and helps from wide-awake farmer friends, have resulted in the Perfect Stock of Improved Large Purple Egg Plant; purer, truer and better than has ever been offered before. It has a handsome shape, a fine dark purple color, beautiful form, large size, and is uniform, making it most attractive for shipping and market use. **PKts. 5c and 10c. 1/2 Oz. 15c. Oz. 25c. 2 Ozs. 50c. 1/4 Lb. 75c. Lb. $2.50.**

100. **BLACK BEAUTY EGG PLANT.**—As large as the New York Spineless and two weeks earlier. Skin a lustrous purplish black. Sets freely. **PKts. 5c and 10c. 1/2 Oz. 15c. Oz. 25c. 2 Ozs. 50c. 1/4 Lb. 90c. 1/2 Lb. $1.75. 1 Lb. $3.50. See Front Page.**

101. **NEW YORK IMPROVED EGG PLANT (Spineless.)**—One of the leading sorts for home and market; a vigorous grower. Fruit large, fine, free from thorns, and produced until frost; skin of a rich purple; flesh white and of a good flavor. We can highly recommend our carefully selected strain of this Egg Plant to market gardeners and amateurs. **PKts. 5c and 10c. 1/2 Oz. 15c. Oz. 25c. 2 Ozs. 50c. 1/4 Lb. 75c. 1/2 Lb. $1.25. 105. **BLACK PEKIN EGG PLANT.**—A great favorite; produces handsome, nearly round, solid fruit, weighing 4 to 8 pounds, of good quality and maturing early. Very productive and satisfactory. **PKts. 5c. and 10c. 1/2 Oz. 15c. Oz. 25c. 2 Ozs. 50c. 1/4 Lb. 90c. 1/2 Lb. $1.75. Lb. $3.50.**

104.—**NEW ORLEANS EGG PLANT.**—Large Dark Purple or New Orleans Market. During severest droughts it fruits abundantly, and its strong, erect plants lift the fruit too high for injury during a rainy spell. In form, handsome; size, large; color, dark purple, and it outyields all other sorts surprisingly. They are good shippers, carry well and remain firm. Many Southern growers make this sort their main reliance. The seed was grown from Pedigree New Orleans stock. **PKts, 5c and 10c. 1/2 Oz. 15c. Oz. 25c. 2 Ozs. 50c. 1/4 Lb. 90c. 1/2 Lb. $1.75. Mustard.

This is grown to quite a large extent in the Southern States. It is used like Spinach, or boiled with meat as greens. The white or yellow seeded variety is cultivated chiefly for medicinal purposes or pickling. Southern Giant Curled and Ostrich Plume are best for general use.

CULTURE.—Sow during September or October either broadcast or in rows six inches apart. Cut when about three inches high. Sow one ounce to eighty feet of drill, or broadcast six pounds per acre.

204. **OSTRICH PLUME MUSTARD.**—This new variety originated in the South, and is one of the most desirable in cultivation. The leaves are exquisitely crimped, ruffled and frilled, and make an excellent table garnishing. It is of superior flavor, and very popular wherever grown. **PKt. 5c. Oz. 10c. 1/4 Lb. 20c. NEW CHINESE GIANT PEPPER.

CHINESE GIANT PEPPER.

226. Double the size of Ruby King Pepper and equally as mild. By careful and numerous experiments we have found this enormous mild red Pepper to be a money maker of great value to the trucker. The monstrous fruits are of a thick, blocky form and of the most brilliant glossy scarlet. They grow 4 to 5 inches broad at the top, and about 4 to 5 inches in length and are divided into four or more large ridges and when ripe they are indented at the blossom end. It is early, productive, and quickly sells on account of its enormous size. The plants are vigorous, stocky, and grow about two feet in height. They are well branched and thickly set with the largest Peppers, frequently half a dozen fruits will touch each other as if in a single bunch; the strong growth of the plants and abundant foliage enable them to mature the large number of fruits almost as early as the Famous Ruby King. **PKt. 5c and 10c. Oz. 25c. 1/4 Lb. $1.00. Lb. $3.50.**

MAMMOTH RUBY KING.

EXTRA SELECTED STOCK.

227. Since first introduced this magnificent variety has so gained in popular favor that it is now recognized as the best and most profitable Red Pepper for market or family use. Everyone who has seen our crops has been enthusiastic in praise of the beautiful plants crowded with the large handsome fruits of a bright ruby red color. The Peppers ordinarily grow from 4½ to 6 inches long by 3½ to 4½ inches through. Added to their beautiful color when ripe is the fact that they are remarkably mild and pleasant to the taste—in this respect unequalled by any other Red Pepper. We cannot too strongly recommend the Ruby King. So mild and pleasant in favor they can even be sliced and eaten with pepper and vinegar, like Tomatoes, and makes a very pleasant and appetizing salad, while for stuffing and pepper hash no other variety can equal them. **Packets 5c and 10c. 265 **Early White Bush Scalloped, or Patty Pan Squash** WE have taken special pains to build up a superior stock of this most useful vegetable, and do not believe it is possible to get as true a strain elsewhere. Good size, uniform, a heavy cropper, and extra early. The skin is white and the flesh fine-grained and tender. It is dwarf in habit, very hardy, having a rind of hard texture, which makes it exceedingly suitable for shipping. Those who have tried our superior stock are loud in their praises of its merits. We want you to try it this year. **PKt. 5c. Oz. 10c. 1/4 Lb. 15c. 1/2 Lb. 20c. Lb. 40c. 5 Lbs. @ 35c. 10 Lbs. $3.00.**

MESSRS. BOLGIANO & SON, Baltimore, Md.

Gentlemen:—Last Spring I planted your "New Century Cauliflower" seed alongside of Henderson's Snow Ball Cauliflower. I have been growing Cauliflower and truck on a large scale for the past 47 years, and in all of my experience I have never seen a Cauliflower to equal the New Century. It is as early as the Snow Ball, but produces much larger and more attractive heads. Whenever I brought it home for our own use the folks always knew I had the New Century, and my helpers who have stood by me many years agree with me in this statement. On the market the New Century Cauliflower would sell at a much higher price than any others, and the person who hesitates about buying the New Century on account of the difference in price, is making a serious and great mistake, because in one small sale he can more than make up the slight difference.

Hoping that your honorable firm will always continue to serve its patrons as well in the future as you have in the past, I remain, Yours truly,

HENRY FAUTH,
Catonsville, Md.

198. **Perkin's Mammoth Long-Podded Okra.**—This new Okra was originated by M. B. Perkins, a New Jersey trucker, after many years of careful study and selection. Pods are an intense green color, 9 to 10 inches long, very slim, and do not get hard. It is much sought by canners. **Pkt. 5c, Oz. 10c, 2 Ozs. 15c, 1/4 Lb. 20c, 1/2 Lb. 25c, Lb. 40c.**

It has a dwarf, shapely, dense pod of an attractive pea-green color. The flavor is exceptionally rich, and those who have once used our Imperial Okra prefer it to any other variety. Our home canners willingly pay 20 to 25 cents per box more than any other sorts would bring. It is with pleasure we commend it to our trade, feeling fully assured that they will appreciate the best Okra for home market and canners, and one which always brings top prices.—**Pkt. 5c, Oz. 10c, 2 Ozs. 15c, 1/4 Lb. 25c, 1/2 Lb. 40c, Lb. 75c.**

Bolgiano's Reliable Onion Seed.

NEW CROP BERMUDA ONION SEEDS. TRUE TENERIFFE SEED.

ONE OUNCE WILL SOW 100 FEET OF DRILL. SIX POUNDS TO AN ACRE.

THESE ONIONS are the leading and most profitable varieties grown in the South. Our stock is TRUE, being grown by contract for us at Teneriffe, located on one of the Canary Islands, off the northeast coast of Africa. The crop of seed this year was a short one, and some will charge extreme prices. We will not take advantage of our customers, but are making the price in reach of all, and at the same time allowing ourselves a fair margin of profit. Some will say to you our stock is old because we sell it low. To this we answer: We guarantee the seed to be fresh and true Teneriffe grown, and will give any prospective buyer a sample to test before placing his order with us, if he so desires.

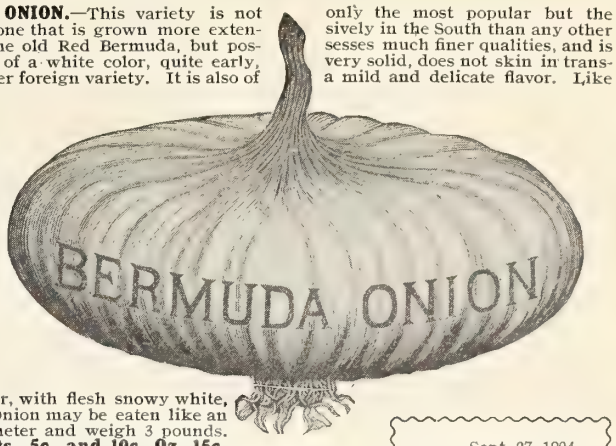
205. **PRIZETAKER ONION.**

Its Mildness of Flavor and Tenderness are Unequalled Even by the Bermuda Varieties.

In Size it is Not Excelled by the Enormous Varieties from Spain.

EIGHT hundred to one thousand bushels to the acre, and a single specimen weighing as much as 6 pounds 2 ounces, are some of the things this handsome Globe Onion will produce. It has a bright, clear, straw color, and invariably grows a perfect globe shape. It is by far the handsomest, most productive, most profitable, and best of all the Yellow Globe Onions. Large Onions can always be raised in a single season directly from seed. It has always brought much better prices than any other Onion; in market it never fails to attract attention on account of its beauty; on the city fruit stalls it has completely taken the place of the large Spanish Onions. The Prize-taker Onion is gifted with strong drought-resisting ability, and we consider this one of its great merits. People who wish to make money should plant the Prize-taker Onion; it is admitted by the most critical Onion growers to be the largest, finest flavored, and most superior Yellow Globe Onion under cultivation. **PKts. 5c & 10c, Oz. 15c, 1/4 Lb. 25c, 1/2 Lb. 40c, Lb. 75c.**

217. **IMPROVED WHITE BERMUDA ONION.**—This variety is not only the most popular but the most salable of all foreign varieties, and one that is grown more extensively in the South than any other sort. The Improved is a selection of the old Red Bermuda, but possesses much more productive. It is oval in shape, of a white color, quite early, far more productive. It is oval in shape, of a white color, quite early, portation, and keeps better than any other foreign variety. It is also of a mild and delicate flavor. Like the Italian varieties it produces full-grown Onions from seed the same season, In the South seed sown in the Fall will produce fine large Onions for market in early Spring. **Pkts. 5c and 10c, Oz. 15c, 1/4 Lb. 60c, 1/2 Lb. $1.00, Lb. $2.00.**



218. **IMPROVED RED BERMUDA ONION.**—Shape and size similar to white, differing only in color; a most desirable sort. **PKts. 5c and 10c, Oz. 15c, 1/4 Lb. 50c, 1/2 Lb. 90c, Lb. $1.75.**

210. **Extra Early Pearl Onion, or White Queen.—Finest American Seed.**—Has an enormous size; grows with wonderful rapidity and makes full-sized roots from seed the first season. The skin is a pure white waxy color, with flesh snowy white, and so delicate and tender that the raw Onion may be eaten like an apple, Often they grow 6 inches in diameter and weigh 3 pounds. Bolgiano's Extra Early Triumph Peas.

70. BOLGIANO'S EXTRA EARLY TRIUMPH PEAS.

FOR YEARS we have placed this wonderful extremely early productive Pea in the hands of the market gardeners and large truckers; it has never disappointed them, but always sustained its thoroughly established reputation as being the **earliest, most productive** and **most salable Pea** brought to the market, always commanding tip-top prices and never running any seconds, as ordinary stocks usually do. It is most important to the grower to meet the earliest market with a good crop of choice Peas, the large-sized pods of which are well filled and attractive. The young Peas have a sweet, luscious flavor which makes them especially valuable. To grow in the South for shipment to Northern markets it has no equal. If you have planted other varieties and failed, try our Triumph and have success. The entire crop is gathered at one picking. This is a very decided advantage, as the pickers usually leave the vines in a very weakened condition, and a Pea which requires two pickings cannot mature its second crop equal to the first, for the injured vines are unable to supply sufficient nourishment to properly fill out the pods. **PKts. 5c. Pt. 10c. Qt. 15c. 2 qts. 25c. Gal. 40c. Peck 75c. Bus. $2.50.**

73. **EXTRA EARLY MORNING STAR PEA.**—Has been ready for picking in 42 days from date of planting, which makes it the earliest Pea in cultivation. It withstands severest changes of weather; pods are perfect and filled, and the entire crop may be gathered for the earliest shipments. Many of our largest customers use this Pea, and it gives them satisfaction. **PKt. 5c. Pt. 10c. Qt. 15c. 2 qts. 25c. Gal. 40c. Peck 75c. Bus. $2.50.**

ALASKA PEAS, EXTRA EARLY, OR FIRST OF ALL.

71. We have taken pains to make this most valuable Pea exceptionally superior. By careful selection, thoroughly rogueing, we have developed a stock of this smooth, blue Pea which in evenness of growth of vine and early maturity of pods is unequalled by any other blue-seeded extra early Pea. The vines are about 2½ feet high, not branching, but bear 4 to 7 long pods, which are filled with medium-sized, beautiful, bright green, smooth Peas of excellent flavor. The dark green color of the pods make it exceptionally desirable as a shipper, for it can be carried long distances without losing its color, which quality, combined with its earliness, uniformity of ripening and luscious flavor, makes it of the highest value to market gardeners, truckers and shippers. We annually grow and sell thousands of bushels which give the best satisfaction. **PKt. 5c. Pt. 10c. Qt. 15c. 2 qts. 25c. Gal. 40c. Peck 75c. Bus. 2.50.**

BOLGIANO'S EXTRA EARLY NONPAREIL PEA.

82. This market gardener's Pea is first in market and an exceedingly true type. It is used by many of our Southern customers with much satisfaction. The entire crop can be had in a single picking, and its beautiful green pod retains its color and freshness longer than any other sorts. It is an abundant cropper and the pods good-sized. It suits long-distance shipment, and we recommend it to gardeners who grow for early markets. **PKt. 5c. Pt. 10c. Qt. 15c. 2 qts. 25c. Gal. 50c. Peck 90c. Bus. $3.00.**

72. **Grandus, or Prosperity Peas.**—$90.00 made from one peck of Peas is remarkable, but that is what one market gardener netted. Planted the same day side by side with the earliest of the Extra Early Peas, this delicious large, wrinkled Pea will mature at exactly the same time. The extra large, dark green pods quickly fill a bushel box or basket, and readily retail around $2.50 per bushel when the Extra Early varieties bring $1.50 per bushel. It withstands an extraordinary amount of cold and wet weather, so plant it early and your returns will surprise you. It matures and is marketed before the Pea Louse gets a chance at it. Besides being so attractive, the sweet, delicious flavor and excellent quality bring back a customer who has once bought them. **Pt. 15c. Qt. 25c. 2 qts. 50c. Gal. 90c. Peck $1.50. 1/2 Bus. $3.00. Bus. 6.00.**

You, as well as ourselves, are both in business for the same purpose—to make money. We can't unless you do.

84. **Premium Gem.**—Improved strain of **"McLean's Little Gem."** This variety is nearly as early as the American wonder, and the vine is decidedly larger, growing to a height of from 12 to 15 inches, and bearing an immense crop of pods, which are larger and invariably well-filled with Peas of best quality. The dry Peas are green, large wrinkled, often flattened. **PKts. 5c. Pt. 10c. Qt. 20c. 2 qts. 35c. Gal. 60c. Peck $1.00. Bus. $3.50.**

96. **Horsford's Market Gardener.**—Wonderfully productive, yielding more shelled Peas per acre than any other variety. The vines grow about 2 feet high, almost completely covered with handsome pods of medium size, packed with delicious Peas, which have proven to be excellent for shipping. **PKt. 5c. Pt. 10c. Qt. 15c. 2 qts. 25c. Gal. 40c. Peck 75c. Bus. $3.00.**

80. **Nott's Excelsior Pea.**—The very best short vine, wrinkled extra early Pea. Vines are more vigorous and taller than the American Wonder, and the pods are one-third larger, containing often 6 to 8 large Peas, close together, and for sweetness and quality it has no superior. **PKts. 5c. Pt. 15c. Qt. 25c. 2 qts. 40c. Gal. 65c. Peck $1.15. 1/2 Bus. $2.25. Bus. $4.50.**

81. **American Wonder.**—This variety stands unrivaled in points of productiveness, flavor and quality, and is without exception the earliest wrinkled Pea in cultivation. It is of dwarf and robust habit, growing from 10 to 15 inches high, and produces a profusion of good-sized and well-filled pods of the finest flavor. Dry Peas, medium size, wrinkled and flattened, pale green. Requires liberal fertilizing. **PKts. 5c. and 10c. Pt. 15c. Qt. 25c. 2 qts. 40c. Gal. 65c. Peck $1.15. 1/2 Bus. $2.25. Bus. $4.50.**

102. **Bolgiano's Everbearing.**—Maturing after Gems, continue a long time in bearing; vines stout, 18 inches high, bearing at top 6 to 10 broad pods. If removed as they mature, season and soil being favorable, the plant will throw out from the axle of each leaf branches bearing pods, which will mature in succession. The large wrinkled Peas cook quickly, are tender, of superior flavor and preferred by many to any other sort. **PKt. 5c. Pt. 10c. Qt. 20c. Gal. 50c. Peck 90c. 1/2 Bus. $1.75. Bus. $3.50.**

74. **First and Best.**—One of the early varieties; 2½ feet high. **PKt. 5c. Pt. 10c. Qt. 15c. 2 qts. 25c. Gal. 40c. Peck 65c. Bus. $2.50.**

75. **Rural New Yorker,**—Pods of fine shade; contains from 6 to 9 Peas of fine quality, prolific, extra early, uniform in growth and ripening. Height 2½ feet. **Package 5c. Pt. 10c. Qt. 15c. 2 qts. 25c. Gal. 40c. Peck 65c. Bus. $2.50.**

BOLGIANO'S WONDER WORKER PEA.

Earliest Extra Early Wrinkled Pea.

83. Six weeks from planting, this wonderful, large wrinkled Pea can be marketed. In earliness, great size and excellent flavor, it is unequalled. The Peas fairly melt in your mouth. The vines grow 2½ feet high, are very hardy, resisting pests and cold weather. It bears an abundance of large, even, deep green pods. It is claimed the Wonder Worker Peas are superior in earliness, hardiness, and large-size pods, to the Gradus or Prosperity Pea. It is the finest early Pea yet introduced. **PKts. 5c. and 10c. Pt. 25c. Qt. 40c. 2 qts. 60c. Gal. 90c. Pk. $.150. 1/2 Bus. $3. Bus. $6.**

86. **Daisy or Dwarf Telephone.**—Plants stout, self-supporting, 18 inches high, heavy cropper of large, bright green filled pods containing 7 to 9 Peas, tender and luscious flavor. **Pt. 15c. Qt. 25c. Gal. 75c. Peck $1.25. Bus. $4.50.**

90. **Dwarf Giant Podded Prolific Green Marrow Pea.**—This new Pea, giant podded, has given satisfaction to all who have planted it the past five seasons. Grows 2 feet, bears enormous, handsome pods 7 to 8 inches in length, filled with large, deliciously flavored deep green Peas, top to bottom; they require no support, owing to their fine, dwarf, stocky habit. We know of no Pea from which so large a bulk of produce can be obtained from a given number of vines; much hardier than either Telephone or Stratagem; can be planted much earlier, matures about ten days later than our famous Extra Early, making a valuable second early, as well as our finest late Pea. **PKt. 5c. and 10c. Pt. 15c. Qt. 25c. 2 qts. 40c. Gal. 65c. PK. $1.00. Bus. $4.**

94. **Dwarf Champion.**—This is a dwarf-growing strain of the popular Champion of England, which for many years has been the standard large-podded main-crop variety. While growing only two feet in height, it retains all the excellence of the parent tall variety. In warm soils and locations, this dwarf type will give better results than the old strain. The vines are strong but short-jointed and stocky in growth, setting large pods very freely. The pods are 3 inches in length, round and well filled to the end. The season is the same as that of Stratagem. The foliage is not so large and dense, hence less liable to mildew during hot weather. **PKt. 5c. and 10c. Pt. 15c. Qt. 20c. 2 qts. 35c. Gal. 60c. Peck $1.00. Bus. $4.00.**

77. **Improved Sugar Marrowfat Pea.**—This is the gardeners' favorite for second-crop Peas. Its luxurious growth and abundant, large and handsome pods reward cultivation, and are used in immese quantities by our canners around Baltimore. Thousands of acres are annually planted with this crop. It is also an exceptionally fine variety for the home garden, as it is early and easily grown. **PKt. 5c. Pt. 10c. Qt. 15c. 2 qts. 30c. Gal. 40c. Peck 75c. Bus. $2.50.**

91. **American Champion Pea.**—Long, green podded, heavy yielder, height 4½ feet. **PKt. 5c. Pt. 15c. Qt. 25c. 2 qts. 35c. Gal. 50c. Peck 90c. Bus. $3.50.**

92. **Shropshire Hero Pea.**—Is wonderfully prolific, having very large pods filled with Peas of most excellent quality and delicious flavor. No Pea ever pleased our customers better. The vine grows 2½ feet. For quality and quantity no Pea surpasses this. Market gardeners find it a profitable crop for market purposes, because of its large, handsome pods so abundantly produced, and because it is such a choice table Pea. **PKt. 5c. Pt. 10c. Qt. 15c. 2 qts. 30c. Gal. 40c. Peck 75c. Bus. $3.00.**

93. **Champion of England, Wrinkled.**—A green wrinkled variety, famous for its delicious flavor. Considered one of the finest varieties for family use, and will follow any of the second early varieties in ripening. **PKt. 5c. Pt. 10c. Qt. 15c. 2 qts. 25c. Gal. 40c. Peck 75c. Bus. $2.50.**

85. **Telephone Improved.**—A wrinkled variety of very robust habit and a great bearer. A single vine produces from 18 to 20 unusually long, well-filled pods of largest size, containing 10 to 11 Peas, often forming a double row. It is very productive, of fine flavor and an excellent table variety; height about 5 feet. **PKt. 5c. Pt. 10c. Qt. 20c. 2 qts. 35c. Gal. 60c. PK. $1.00. 1/2 Bus. $2.00. Bus. $4.00.**

5. **BEST OF ALL EARLY MARKET.**—One of the finest, most productive and most salable Extra Early Round, Green-Pod Bean Grown. This fine new variety has numerous advantages over many other green-pod sorts. The pods are of a light silvery green color, long and perfectly round, solid flesh, very tender and stringless. In earliness and productiveness it is excellent. The pods are borne in thick clusters well up under the foliage, thus they are thoroughly protected. Tests have proven it to be hardier than the Valentine, which enables it to be planted much earlier. Market gardeners will find it a very profitable sort to grow. **PKts. 5c and 10c, Pt. 15c, Qt. 25c, 2 Qts. 75c, Pk. $1.50, Bu. $6.00.**

In this new variety, we have one of the very best wax sort for market gardeners and private families. It will sell twice as well and at a higher price than other sorts. The pods are longer, broader and of a brighter yellow color than many other sorts, very superior quality, tender and stringless. The vines are of vigorous growth, leaves dark green, hardy, and yield enormous quantities of large handsome, flat, meaty pods, borne well up from the ground, and has not shown any disposition to rust, no matter where grown. It is from eight to ten days earlier than the Valentine. The seeds should not be planted closer than four inches apart in in the row. We particularly recommend this valuable sort to market gardeners. **PKt. 5c and 10c, Pt. 15c. Qt. 25c, 1/2 Pk. 80c, Pk. $1.50, Bus. $6.00.**

19. **CURRIE'S RUST-PROOF WAX BEAN.**—Is the earliest to mature of either the Green or Wax Beans. It is ready for market in 25 days from day of planting. Its beautiful, pure, golden, long-flat pods of extra fine quality are borne in abundance and attract the admiration of both the planter and the consumer. It being the first bean in the market, always commands most profitable prices. It is entirely free from rust and blight. **PKts. 5c and 10c, Pt. 15c. Qt. 25c, Gal. 75c, Peck $1.50, Bus. $6.00.**

21. **TAIT'S NEW WHITE WAX.**—The name of this handsome Bean is not taken from the color of the pods, as might be supposed, but from the clear white of the dried Bean, the pods being a fine rich, yellow. It is hardy, and seems to possess most every quality which could be desired in a Wax Bean. It is certainly one of the handsomest Wax Beans on the market, and we do not hesitate to commend it strongly. It should not be planted too closely. **PKts. 5c & 10c, Pt, 15c, Qt, 25c, Gal. 75c, Pk. $1.50, Bu. $6.**

22. **NEW DAVIS KIDNEY WAX.—The King of Flat Wax Beans.**—*See Photo.* Surely time, energy and brains have culminated in this, the grandest of all Flat Wax Beans. A beautiful form, handsome long pods, attractive color, luscious flavor, prolific yielder, rust proof, excellent shipper—are the points that make this grand Bean the perfect success that it is. It is demanded by market gardeners, truckers and shippers everywhere. It is a universal favorite. **PKts. 5 and 10c, Pt. 15c. Qt. 25c, Gal. $75c, Pk. $1.50, Bu. $6.00.**

20. **WARWELL'S KIDNEY WAX.**—Our stock of this very superior Bean has been saved with such care that growers far and near, repeatedly state to us that they have never seen its equal, and are always anxious to get the orders in early in order to secure the same. It is hardier, both pods and plants are more robust and healthy and it is a much heavier yielder than the ordinary stocks that are sent out for which extremely high prices are asked, and it is a remarkable shipper, and seldom shows any sign of rust. **PKt. 5c and 10c, Pt. 15c. Qt. 25c. Gal. $1.00, Peck $2.00, Bus. $7.50.**

18. **SUNSHINE WAX BEANS.**—The beautiful, clear, attractive, bright golden color of this most delicious Wax Bean gave it the name of Sunshine Wax. In the market, side by side with many of the older and better known Wax Beans, the Sunshine Wax shone out and immediately attracted the attention of all. The vines are so heavily laden with an abundance of long, round, shapely pods it seems hardly possible that they can hold them all. You think of the Sunshine again when you are marketing a large crop of fine Beans a week or two before your neighbors have begun to pick. **PKt. 10c, Pt. 20c, Qt. 35c, Gal. $1.25, Peck $2.00, Bus. $8.00.**

23. **JONES NEW STRINGLESS WAX.**—Is sure to please, and give entire satisfaction at all times and under all conditions. It is a yellow podded bush bean with white seed. The pods are round and plump, and attain a length of five to seven inches. They are thick and fleshy, and as handsome in the basket as could be desired. The pod is perfectly stringless, thus giving name to the variety. The beans are of prime table quality, either green or dry. It makes a fine display holding its fresh appearauce for a long time after being picked from the bush. **PKt. 5c and 10c, Pt. 20c, Qt. 35c. PK. $1.50, Bus, $6.00.**

25. **GOLDEN EYE WAX.**—Early, vigorous and a bountiful yielder of beautiful, tender, waxy pods. The vine grows 1½ feet high, holding the pods well off the ground, The pods are shapely, flat and large. **PKts. 5c & 10c, Pt. 15c. Qt. 25c, Gal. 65c. Peck $1.25, Bus, $5.00.**

26. **IMPROVED GOLDEN WAX.**—It has round, clear, waxy white pods, very fleshy, crisp, tender and stringless. It is very productive. **PKts. 5c and 10c. Pt. 15c, Qt. 25c, Gal. 75c, Peck $1.50, Bus. $6.00.**

BOLGIANO'S NEW EXTRA EARLY DEEP BLOOD BEAUTY BEET.

18. Our long experience in the growing of Beets has shown this new strain of Beet to be the best Extra Early deep-blood Turnip Beet, not only for market gardeners, but home garden. Its small upright growing tops, extra early maturing, splendid shape and deep crimson color make it popular with everyone. The rows may be grown close together. In the leaf the stem and veins are dark red, the blade green. The roots are globular and peculiarly smooth; color of skin and flesh is deep blood red, very crisp, tender, fine-grained and sweet, remaining so for a long time. We believe this excellent new stock will produce a crop more uniform in shape, color and quality than any other Beet ever placed in the hands of the trucker. **Pkt. 5c, Oz. 10c, 2 Ozs. 15c, 1/4 Lb. 20c, 1/2 Lb. 30c, 1 Lb. 50c.**

BOLGIANO'S New Leader Cabbage

TRUE AMERICAN GROWN.

26. **Bolgiano's New Leader Cabbage.**—Crowned with success by the leading Cabbage growers throughout the country. "THE LEADER" of all flat-headed Cabbages. As early as the Wakefield, yields one-third more per acre than any other extra early Cabbage. The outer leaves are so few and so small that they can be planted very close. The heads are compact and solid from the time a head is formed and keeps so until thoroughly matured, thus enabling extremely early cutting of small hard heads, or later, when the Wakefields come in, of large thoroughly matured, solid, round, flat heads. In quality it is again "The Leader"; the veins of the leaves are extremely fine; its rapidity of maturing, compact growth gives it a flavor unequalled. The demand for such Cabbage in Northern markets is becoming greater and greater each year. The people want an extremely early new slaw head Cabbage and "THE LEADER" supplies their wants. **PKts. 5c. and 10c. Oz. 25c. 1/4 Lb. $1.00. 1/2 Lb. $1.75. Lb. $3.50.**

HENDERSON'S EARLY SUMMER CABBAGE SEED

LOUISVILLE DRUMHEAD

(Best of all Drumhead Cabbages.)
(True American Grown.)

50. There is no Cabbage of the Drumhead type which can be compared with this beautiful representative, in shape, color, firmness and excellent table qualities. It occupies the very first place. Originally a fine stock, it has become under our careful breeding, simply perfect in every point, and we find each year a stronger tendency on the part of our customers to grow more and more of this excellent stock. While not as large as some of the coarse, inferior kinds, it is of fine size, very solid and uniform to a degree which is not excelled by any other cabbage. Heat and moderate drought have little effect upon it on account of the peculiarly short stem and low habit of growth, so that we particularly recommend it for sections where late cabbage is apt to be exposed to such conditions. **PKts. 5c. and 10c. Oz. 15c. 2 Ozs. 25c. 1/4 Lb. 50c. 1/2 Lb. 75c. Lb. $1.50.**

MESSRS J. BOLGIANO & SON, Baltimore, Md. April 14th, 1903.
DEAR SIRS—I have just finished cutting my Celery crop of three acres, 3064 crates selling f. o. b. here, for the nice little sum of $6,120.72. This has been an off-year too for us, as well as other Florida points, and this was grown from your seed secured last summer. I had a quarter of an acre measured and the Celery on it sold for $730.00. That was my heaviest yield. Yours truly, H. H. CHAPPELL. Fla.

ROCKY FORD CANTELOUPE.

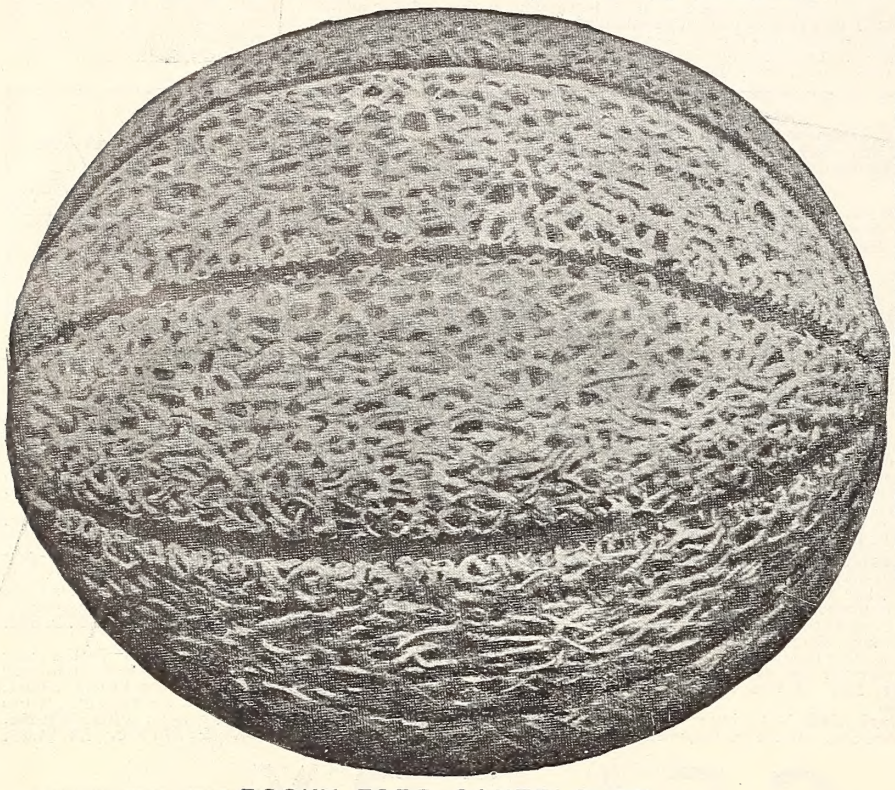
BOLGIANO'S SPECIAL THOROUGHBRED STOCK

1 Oz. to 60 Hills, 2 Lbs. to Acre.

Purest and Best Strain Grown.

A Sweet Luscious Melon

World Famous for its Captivating Flavor.



ROCKY FORD CANTELOUPE

12 STRONG POINTS FOR WHICH OUR STOCK IS FAMOUS.

1. **Size same as the picture.**
2. **Netting well defined and deep.**
3. **Blossom-end well protected with a small button.**
4. **Ten distinct ribs.**
5. **No netting across the space between the ribs.**
6. **The space between the ribs well defined from stem to blossom button, but not too wide to weaken the melon.**
7. **When cut, flesh is green, changing VERY SLIGHTLY toward yellow at centre.**
8. **Flesh very deep so as to leave a small seed cavity.**
9. **Flesh fine grained.**
10. **Our seed is saved from the finest melons of the first picking.**
11. **Each individual melon is cut open by hand, and carefully inspected both inside and out.**
12. **Last, but not least, it is an excellent shipper, having deep flesh at the blossom end. The blossom end in many other strains is a very weak point.**

157. There is a difference in the stocks of the Rocky Ford Melons that are being placed in the truckers, hands, and that difference is most severely felt when the trucker places his so-called Rocky Ford stock on the market alongside of some of Bolgiano's true, handsome, most deliciously flavored stock. It does not then need the eye of an expert to discern the difference, for the one presents regularity of form, uniformity of size, each Melon cut proving the parent luscious stock; and the huckster, shipper, commission merchant, fruiterer, hotel-keeper, quickly purchase this stock, knowing that they never have the trouble selling at good prices a Melon of such trueness and quality. You may have been fooled elsewhere. You do not under any circumstances, want to lose your future opportunities of making compensating prices from the sale of this world renowned Melon. But you do want to plant the real true stock from Bolgiano of Baltimore, who can send it direct to you, no matter where you live. Our crop has been a large one this year, and we are willing that you shall share with us the benefit of Nature's blessings, and are therefore making the price reasonable, so everyone who sees this can have no excuse for plauting poor mixed stock. It is impossible to secure truer, better stock, even if you pay five times the price we ask. We await your order, and shall take pleasure in promptly filling the same. **Pkt. 5c, Oz. 10c, 1/4 Lb. 15c, 1/2 Lb. 25c, Lb. 50c, Write for Special Prices in Large Quantities.**

158 **Bolgiano's "FREE LUNCH" Canteloupe.**

ARE THE BEST FOR THE SOUTH.

In Drills, 1 to 1½ Lbs. to Acre. Broadcast, 2 to 3 Lbs. to Acre.

OUR TURNIP AND RUTA BAGA SEED are grown exclusively from perfect Turnips, every one of which is selected and then transplanted for the growth of our seed. Hence, Turnip crops from our seed must of necessity be very choice and most satisfactory in size, in trueness, in solidity and in beauty. Crops from our seed will prove infinitely better than much of the trashy seed, sold for Turnip Seed, which, from the careless manner in which it is grown and inferiority of stock, so frequently produces little more than Turnip tops. Send to us direct and secure your supply from our superior stock.

300 Per Cent. Increase in Peas.

Weare, N. H., December 19, 1904.

I experimented with Culture last year and was more than satisfied with the results. I planted four acres of American Wonder Peas, that I treated with the Bacteria, then planted some of the same kind of peas that were not treated, then some more that were treated. I was surprised to see the inoculated peas go ahead of those which were not inoculated. The vines grew nearly twice as tall, a very dark green and I honestly believe that there was three times as many peas on the inoculated vines as there was on the vines un-inoculated, planted in the same kind of soil, side by side and from the same seed. I inoculated some beans with the same results. Never before did I see bean vines so loaded with pods as they. I am very much interested in Nitro-Culture and believe that it is the right thing in time of need. If the farmers will begin now and use the Culture, inside of five years they will see their farms, that were all worn out, back in a good state of cultivation. I can give you further proofs of what I have written if you want it.

BOLGIANO OF BALTIMORE.

IMMENSE CROPS WITHOUT FERTILIZERS.

This new method of fertilizing soils is endorsed by the U.S. Department of Agriculture as follows:

The U. S. Department of Agriculture says:

"It is worse than useless to attempt to grow any leguminous crop without being certain of the presence of the bacteria which enable the plants to fix free nitrogen. Certain regions are practically devoid of the right kind of bacteria, and unless some artificial means of inoculating the germs be resorted to, the crop will be a failure."

Increase more than 100 Per Cent.

Flintdale, Ala., December 19, 1904.

I was well pleased with the results obtained from inoculating Valentine beans, also Cow-peas. The beans and cow-peas that I inoculated more than doubled the crop. The photograph of beans on this page was taken from plants grown on my farm, and is a true photograph.

If farmers or truckers have early crops which can be harvested by mid-summer, would take the same field and plant an inoculated crop such as Crimson-Clover, Cow-Peas, or other quick growing legumes, on the field they would make a very good growth before Winter set in, and in the Spring would come along very rapidly. These crops if ploughed under in the Spring would have stored sufficient nitrogen in the soil to largely increase any crop of grain, cotton or potatoes, which might be planted on the same ground. If this system of planting inoculated leguminous crops, in the Fall, were followed out the Bacteria would collect at a low estimate 100 pounds of **Nitrogen** per acre for the Spring crop, and thus save the cost of nitrogenous fertilizers.

Using **NITRO-CULTURE** means placing a little nitrogen manufacturing plant on every acre which you inoculate, thus procuring your own nitrogen in place of paying 15 cents per pound for it.

The following are only a few of the many letters which are being constantly received from those who use the Cultures.

Cisco, N. C., May 12th, 1905.

"Where **NITRO-CULTURE** was given a fair trial here on garden-peas, it has given results. We have one man here who tried the Culture alone on one row. The land was very good. The rest of his peas was expensively manured with compost and guano, which was probably worth $15.00 per acre. The Nitro-Culture row was by far the best row in the field, and at least doubled any other row in the first picking, and they were planted a week later than the rest."

ITS PRACTICAL VALUE.

The use of "Nitro-Culture" is of the utmost practical value and especially so on the poorer and sandy soils, so abundant in all parts of the South. It makes possible the successful growth of any of the clovers and vetches in the South. It means that with the inoculation of the soil with the bacteria of alfalfa that this most valuable hay crop can be made a success on **any** farm where failure has been the general rule before. It means increasing the yields of all the leguminous crops from 25 to 100 per cent, on light and thin soils. It means largely increased amounts of hay and forage where these crops are grown for hay and forage purposes. It means that where the soil is thoroughly inoculated and a leguminous crop grown, that from 75 to 125 pounds of actual nitrogen in a shape available for use as plant-food for succeeding crops, per acre, is deposited in the soil for the use of that succeeding crop, the actual commercial value of such deposit being, when bought in the shape of a commercial fertilizer, $15.00 to $20.00. It means a reduction of 50 per cent. in our fertilizer bills in crops of cotton, corn, oats, hay or any other crop where these crops are used in rotation following a leguminous crop grown where the soil has been thoroughly inoculated. To the grower of peas and beans for market or shipment it means not only larger size of vine and bearing surface but a much longer bearing season. It means larger and more profitable crops on every farm where "Nitro-Culture" is used intelligently.

NITRO-CULTURE

Consists of Nitrogen-fixing-Bacteria prepared and dried on absorbant cotton, and sent out in small packages, with necessary salts, it can readily be prepared for use by any farmer, as full directions accompany each package. **NITRO-CULTURE** when applied to leguminous seeds, for which they are prepared, have the power to collect nitrogen out of the free air, and fix it in the soil, as well as on the roots of the leguminous plants and under favorable conditions they multiply very rapidly in the soil, supplying all of the nitrogen which the growing crops desire, or can use, also enriching the soil at the same time. It is generally estimated that more than 100 pounds of nitrogen per acre is added to the soil by **Nitro-Culture.** This if purchased in the form of **Nitrate of Soda,** or other **Nitrogenous Fertilizers** would equal in cash value about $20.00 per acre. This point is being brought out very clearly by those who planted leguminous crops last year, after inoculating the seed. This year they report where wheat, corn, barley, oats, cotton or other crops are planted on the same field, there is a remarkable increase, and a line is distinctly shown in the field where the inoculated leguminous crop had been grown the year before; thus proving that **NITRO-CULTURE** will not only very largely increase the legumes, such as beans, peas, vetch, peanuts, clover, alfalfa, etc., but the next succeeding year any crop which may be planted in the same field will be tremendously benefited as per following tests:

	Original yield per acre	Yield per acre after inoculated crop	Gain in Weight	Gain in Value	Per Cent. of Gain
COTTON	932 lbs.	After Red Clover 1304 lbs.	372 lbs.	$44.64	40 per ct.

THE INOCULATING OUTFIT

Could not do without NITRO-CULTURE.

Clarkville, Tenn., December 19, 1904.

I prepared a piece of ground, after peas, subsoiled it, treated Alfalfa seed with Bacteria and now have a very fine stand, one that will go through winter all right. I have so much faith in the Bacteria that I would not think of sowing any seed without treating it

GOLD GOODLETT.

DOUBLE THE SIZE. DOME, N. C.

Yes, I did experiment with Nitro-Culture in 1904, on Soy-beans. The growth where it was used was very luxuriant, indeed much more so than where it was not used. It seems to me that the inoculated plants were double the size of the others, which were not inoculated.

D. L. CLEMENTS.

IN GEORGIA.

I used the Culture on alfalfa and cow-peas last spring and was well satisfied with the results. I have spoken favorably of them to several of my neighbors.
